

Research Operations specialist with 7+ years across UX research, service design, and product operations.
I build the tooling, workflows, and governance that enable product teams to conduct research safely and at scale: automating recruitment, creating self-service toolkits, and ensuring GDPR/PII compliance. Currently scaling end-to-end self-service research across 10 teams at DocPlanner with AI-assisted tooling, turning research from a bottleneck into a repeatable, democratized capability.

EXPERIENCE

DocPlanner SpA

Product and Research Operation Specialist Jun 2025 – Now

- Automated recruitment process with N8N and Google Apps Script, cutting recruitment time by 30% and freeing personal capacity for higher-value work.
- Built operational automations: AI-assisted CSAT open-response analysis, cross-file spreadsheet population, scheduled anonymisation of research files, and multilingual survey consolidation.
- Designed and maintained a self-service research toolkit (5 templates, 2 training programs) enabling non-researchers to run studies independently.
- Built three Claude (AI) skills giving 10 product teams end-to-end research autonomy, with one paired with a training to detect and mitigate cognitive bias in interviews and surveys.
- Built three Claude (AI) skills giving 10 product teams end-to-end research autonomy, with one paired with a training to detect and mitigate cognitive bias in interviews and surveys.

Product and User Researcher Feb 2022 – Jun 2025

- Embedded AI across the workflow: ChatGPT for multilingual survey/comms templates, Gemini for anonymising single transcripts and survey data, NotebookLM for first-pass pattern and quote extraction.
- Led a self-directed study that surfaced a high-impact, previously overlooked user group, directly driving a dedicated new in-app section built around their needs.
- Translated findings into guidelines that improved existing features and retired another, sharpening product focus.
- Conducted on-site shadowing sessions in clinics to capture real-time product usage, grounding decisions in observed behavior rather than self-report.

Tangity – NTT DATA Design Studio

Service and UX Designer Mar 2018 – Feb 2022

- Applied and suggested research methodologies in multi-sector contexts (robotics, banking, education), through >10 co-design workshops, developing a strong ability to adapt to specific client needs.
- Designed end-to-end digital solutions from the research phase, mostly managed on my own, to the definition of the development strategy, working with internal technical teams and clients.

SKILLS

Research Operations	Recruitment&screening, training programs for non-researchers research repository building, GDPR/PII compliance, budget management, methodological standards & templates, panel management.
Automation & AI	Claude, ChatGPT, Gemini, NotebookLM, N8N, Google Apps Script — AI skill-building, analysis, and workflow automation.
Research Toolset	Quantitative - Typeform, Superset, Tableau, Google Analytics, Amplitude Qualitative - Condens, Dovetail, Miro, in-depth interviews, workshops, contextual shadowing
Design toolset	Figma, Sketch, Adobe Suite
Languages	Italian (<i>native</i>), English (<i>fluent</i>), French (<i>elementary</i>)

EDUCATION

University of the Arts London 2016 – 2018
Master of Service Experience Design Innovation

Politecnico di Milano 2012 – 2015
Bachelor of Product Industrial Design
